DoNotStress

Windows copy-paste guide for Docker

Open **PowerShell** (not the old Command Prompt). Docker Desktop must be running. You do not need Python installed on the machine.

1. Check Docker

```
docker --version
docker info
```

If the second command fails, start **Docker Desktop** and wait until it says it is running, then try again.

2. Go to the project folder

Unzip `DoNotStress_Docker_ready.zip`. Then:

```
cd $HOME\Downloads\DoNotStress_Docker
```

If you unzipped somewhere else, change that path. Confirm the Dockerfile is there:

```
dir Dockerfile
```

3. Create .env with the key

```
Copy-Item .env.example .env
@"
GEMINI_API_KEY=AQ.Ab8RN6Kk3cbPZQ-3WTQ9V543YpyZYZSaEiLqCZh-6rBXrUBb3A
FLASK_SECRET_KEY=
DONOTSTRESS_DATA_PATH=
"@ | Set-Content -Encoding utf8 .env
```

That key is required for live AI analysis. Tests do not need it. Do not commit `.env`.

4. Build the image

```
docker build -t donotstress .
```

The first build downloads Python 3.12 and installs the packages. Later builds are faster.

5. Run the app

```
docker run --rm -p 5000:5000 --env-file .env -v donotstress-data:/app/data donotstress
```

Leave this window open. When you see *Running on*, open `http://127.0.0.1:5000` in a browser.

If port 5000 is already in use:

```
docker run --rm -p 8080:5000 --env-file .env -v donotstress-data:/app/data donotstress
```

Then open `http://127.0.0.1:8080`.

6. Use it

Student check-in

Open the home page. Use a 7-digit student ID starting with 2 (example 2123456). Answer the questions and submit. The student ID is not sent to the AI.

Admin sign in

Use Admin sign in, or open `http://127.0.0.1:5000/admin/login` with the fixed coursework account:

- Username: `admin`
- Password: `DoNotStress2026!`

You land on `/records`, which lists saved check-ins.

7. Run the tests (second PowerShell window)

```
docker run --rm donotstress python -m pytest tests/ -v
```

Tests use sample responses and mocks. They do not need the API key.

8. Stop

In the window where the app is running, press **Ctrl+C**. Records stay in the Docker volume `donotstress-data`.

9. Start it again later

```
cd $HOME\Downloads\DoNotStress_Docker
docker run --rm -p 5000:5000 --env-file .env -v donotstress-data:/app/data donotstress
```

Rebuild only if the code changed:

```
docker build -t donotstress .
```

If something fails

Problem	What to do
Cannot connect to the Docker daemon	Start Docker Desktop and wait until it is running.
Port is already allocated	Use -p 8080:5000 and open port 8080.
Check-in says try again	Confirm .env has the key above, then restart the container.
Admin login fails	Use username admin and password DoNotStress2026!. Reload if the page expired.
Records disappeared	Start again with -v donotstress-data:/app/data.
Cannot find the Dockerfile	cd into the folder that contains it.
